## 厦门大学学位论文原创性声明

本人呈交的学位论文是本人在导师指导下,独立完成的研究成果。  
本人在论文写作中参考其他个人或集体已经发表的研究成果,均在文中  
以适当方式明确标明,并符合法律规范和《厦门大学研究生学术活动规  
范(试行)》。

另外,该学位论文为( )课题(组)  
的研究成果,获得( )课题(组)经费或实验室的资  
助,在( )实验室完成。(请在以上括号内填写课题或  
课题组负责人或实验室名称,未有此项声明内容的,可以不作特别声  
明。)

## 摘 要

蓝牙技术是一种无线数据与语音通信的开放性全球规范，它以低成本的近距离无线连接为基础，为固定与移动设备通信环境建立一个无缝连接。现今，蓝牙技术在实际中已经有广泛的应用。由于手机的普及率较高，因此蓝牙手机成为目前蓝牙技术的主要应用，而与之相匹配的蓝牙耳机则以其便携性和安全性等特点也正在逐渐受到消费者的青睐。因此，设计出一种具有功能强、性能高、成本低的蓝牙耳机已成为蓝牙技术领域的一个重要课题。

本文设计了一种型号为 BT620S 的立体声蓝牙耳机。从硬件、射频、软件和声学几个方面详细介绍了整个设计过程。

在电路中，BT620S 采用了 CSR 的 BC3-MME 蓝牙解决方案。该方案能够在使用最少的外围元件下实现蓝牙协议 2.0 和 A2DP 立体声音频等功能要求。并且，较低的工作和待机功耗使得 BT620S 能够达到 16 小时的连续通话和 260 小时的待机。经过硬件测试验证了 BT620S 符合性能规格要求，并能够达到 ESD 标准。

在射频设计中，BT620S 采用自主设计的反 F 型天线。根据天线仿真和调谐，将蓝牙天线印制到线路板上。这种类型天线不仅可以实现蓝牙射频规范要求，而且具有更好的可靠性和一致性，不需要添加额外的成本。通过传导和辐射测试，验证了 BT620S 的射频性能符合射频规范要求。

应用 CSR 提供的协议栈、库函数和 Bluelab 等软件开发平台，可以简化软件开发流程，节省软件设计资源。用户可以直接通过 BlueVox 和 PSTool 进行功能设定、软件升级和调试。针对立体声蓝牙耳机设计的功能测试以及 IOP 测试可以查出 95% 以上的软件设计缺陷。

在声学设计中，BT620S 使用动圈式 Hi-Fi 扬声器和全向型麦克风，接收频率响应范围可达 100Hz-4KHz。声腔的设计是将声腔的几何参数和声学参数转换成电参数，作出等效电路，再通过 Pspice 进行仿真，得出接收和发送的频率响应和灵敏度。BT620S 采用 B&K2012 音频测试系统进行声学测试。经过验证，BT620S 在接收和发送路径上的音频性能符合声学规格要求。

目前，BT620S 立体声蓝牙耳机已经进入批量生产，市场反馈良好。该产品为蓝牙音频设备提供了一个典型的设计范例，并且 BT620S 的测试方法和过程对通讯电子类产品具有很高的参考价值。

## Abstract

Bluetooth technology is a kind of open global criterion for wireless data and audio communication, which bases on low cost and near end wireless connection, and establishes a seamless connection between immobility and mobile communication products. Nowadays, Bluetooth technology has been widely using in practical. Due to cell phone has a very high popularization, so the Bluetooth mobile phone is now becoming the main application for Bluetooth technology. Being as a accessory for mobile phone, the Bluetooth headset is getting more and more consumers' favorite, which depends on it's handy and safe characteristics. Therefore, How to design a kind of Bluetooth headset with powerful function, excellent performance and low cost is becoming a significant subject in the field of Bluetooth technology.

This text is aiming to design a stereo Bluetooth headset which type is BT620S. The whole design process is being presented in detail from hardware, radio, software and acoustics.

From electrical circuit, BT620S introduce BC3-MME Bluetooth solution. This solution is able to comply with Bluetooth 2.0 profile and A2DP stereo audio and some other functional requirements by using minimum peripheral components. And the low operating and standby power consumption allows BT620S is able to achieve up to 16 hours of talk time and 260 hours of standby time. BT620S is complied performance requirements after hardware verification tests, and it can meet ESD criterion.

From RF design, BT620S is using a kind of inverted-F antenna by our independent design. It is a Bluetooth antenna being plated on PCB, according to antenna simulation and tuning. This kind of antenna doesn't only meet the requirement for Bluetooth radio specification, but also be provided with better reliability and uniformity without additional cost. By conducted and radiated verification, the RF performance for BT620S is able to comply with radio frequency specification requirement.

Being applied the software development platform of protocol stack、function database and Bluelab that CSR provided, the software development process can be simplified and development resource can be saved as well. Users are able to directly implement functional setting、Software update and debugging. The functional tests and IOP test were designed for stereo Bluetooth headset particularly, it can find out up to 95% of software design errors.

From acoustic design, BT620S is using dynamical loop Hi-Fi speakers and an omnidirectional microphone, which the range of receive frequency response is up to 100Hz-4KHz. The sound cavity design is to transform the geometric parameters and acoustic parameters of the sound cavity to electric parameters, and make the equi-circuit, simulate the circuit by Pspice afterwards, that we can get the RX and TX frequency response and sensitivity. We are adopting B&K 2012 audio analyzer system to perform acoustic test for BT620S. After verification test, the performance for BT620S on both receive path and transmit path are able to comply with the requirement for acoustic specification.

Nowadays, BT620S stereo Bluetooth headset has already been coming into mass production, and the feedback from market is favorable. This product provides a typical design example for Bluetooth audio device, and the testing methods and processes provide a very high reference value for electrical communication products.

**Key words:** Bluetooth headset; BC03-MME; Inverted F antenna

## 目 录

第一章 绪论.....	1
1.1 蓝牙技术的发展.....	1
1.2 蓝牙技术的特点.....	2
1.3 蓝牙协议概诉.....	4
1.4 蓝牙技术的应用.....	7
1.5 结论.....	8
1.6 本文的内容组织.....	8
参考文献.....	9
第二章 BT620S 立体声蓝牙耳机的设计方案.....	10
2.1 蓝牙耳机的技术特点.....	10
2.2 BT620S 蓝牙耳机的规格和主要功能.....	10
2.3 BT620S 蓝牙耳机的设计规格.....	12
2.3.1 蓝牙 SIG 规范.....	12
2.3.2 电子规格.....	12
2.3.3 音频性能.....	16
2.4 BT620S 蓝牙耳机的解决方案.....	19
2.4.1 BC3-MME 的特性.....	20
2.4.2 BC3-MME 的内部结构.....	20
2.4.3 BC3-MME 的主要功能单元.....	21
2.5 BC3-MME 方案的立体声蓝牙耳机模型.....	24

## Table of Contents

<b>Chapter 1 Introduction.....</b>	<b>1</b>
1.1 The development of Bluetooth technology.....	1
1.2 The characteristic of Bluetooth technology.....	2
1.3 The summary of Bluetooth protocol.....	4
1.4 The application of Bluetooth technology.....	7
1.5 Conclusion.....	8
1.6 The scheme of textual content.....	8
Reference.....	9
<b>Chapter 2 Design propose for BT620S stereo Bluetooth headset.....</b>	<b>10</b>
2.1 The characteristic of Bluetooth headset.....	10
2.2 The specification and main functions of BT620S Bluetooth headset.....	10
2.3 Design specifications for BT620S Bluetooth headset.....	12
2.3.1 Bluetooth SIG criterion.....	12
2.3.2 Electrical specification.....	12
2.3.3 Audio specification.....	16
2.4 Design solution for BT620S Bluetooth headset.....	19
2.4.1 The characteristic of BC3MME.....	20
2.4.2 The inner structure of BC3MME.....	20
2.4.3 Main functional cell of BC3MME.....	21
2.5 Stereo Bluetooth headset model of BC3MME solution.....	24
Reference.....	25
<b>Chapter 3 Hardware design for BT620S stereo Bluetooth headset....</b>	<b>26</b>
3.1 Schematic design .....	26
3.1.1 Block diagram.....	26
3.1.2 Schematic.....	27

<b>3.2 Circuit analysis.....</b>	<b>28</b>
3.2.1 BC352239A Bluetooth chip.....	28
3.2.2 Crystal.....	30
3.2.3 Flash memory.....	31
3.2.4 Radio I/O circuit.....	32
3.2.5 Peripheral power supply.....	33
3.2.6 Charge circuit.....	34
3.2.7 Reset circuit.....	36
3.2.8 Microphone bias circuit.....	37
